

## Activity Sheet 3A Sort Cards

One side of the Moon is always dark.

The Moon is extremely hot during the daytime and extremely cold during the night.

Sometimes we see earthshine, when the Sun's light reflects off the Earth onto the Moon.

We always see the same side of the Moon from Earth.

## Slap Cards Basics

The Moon rotates much more slowly than the Earth does.

It takes just over one second for moonlight to reach Earth.

You can't see the Earth from the Moon.

In the Southern Hemisphere the Moon is upside down compared to the Northern Hemisphere.

# Slap Cards Basics

You only see the Moon at night.

There is no gravity on the Moon
